

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

**1. (currently amended):** An ointment patch comprising a support, an ointment, and optionally, a separator,

wherein the ointment is coated on one surface of the support in an amount of 0.1 mg to 200 mg per 1 cm<sup>2</sup> of the support, and

the support has a thickness of 1 μm to 2000 μm and 50% modulus of 5 g/cm to 600g/cm, a water vapor permeability of 100g/m<sup>2</sup>/24hrs or higher, and is composed of a copolymer of vinyl acetate and acrylic acid, wherein the copolymer is obtained by copolymerizing a vinyl acetate, an alkyl ester of a (meth)acrylic acid with the alkyl having 4 to 14 carbon atoms on average, and a (meth)acrylic acid in amounts of 0 to 90 wt%, 10 to 97 wt%, and 0 to 15 wt%, respectively, and the copolymer is cross-linked,

wherein the support is impermeable to the ointment.

**2-3. (canceled).**

**4. (previously presented):** The ointment patch according to claim 1, wherein the support is overlaid with cloth.

**5. (previously presented):** The ointment patch according to claim 1, wherein the support is non-ointment-migration-permissive.

**6. (previously presented):** The ointment patch according to claim 1, wherein the support includes an adhesive layer disposed on the ointment-coated surface of the support in order to allow the ointment patch to adhere to skin.

**7. (previously presented):** The ointment patch according to claim 1, wherein the ointment patch is folded onto itself to bring the ointment-coated surface into contact with itself.

**8. (previously presented):** An applicator comprising a support, and an adhesive layer disposed on one surface of the support to allow the applicator to adhere to skin, wherein the support has a thickness of 1  $\mu\text{m}$  to 2000  $\mu\text{m}$ , 50% modulus of 5 g/cm to 600 g/cm, a water vapor permeability of 100  $\text{g/m}^2/24\text{hrs}$  or higher, and is composed of a copolymer of vinyl acetate and acrylic acid, wherein the copolymer is obtained by copolymerizing a vinyl acetate, an alkyl ester of a (meth)acrylic acid with the alkyl having 4 to 14 carbon atoms on average, and a (meth)acrylic acid in amounts of 0 to 90 wt%, 10 to 97 wt%, and 0 to 15 wt%, respectively, and the copolymer is cross-linked, and wherein the support is impermeable to the ointment.

**9-10. (canceled).**

**11. (previously presented):** The applicator according to claim 8, wherein the support is overlaid with cloth.

**12. (previously presented):** The applicator according to claim 8, wherein the support is non-ointment-migration-permissive.
